

# FLOATING DESTONER

Model Number: ME-FD-1857

## PRODUCT DESCRIPTION

Our floating destoner is designed to wash and remove dirt and stones from in-shell product using a series of tanks. The top tank uses a jet of water which pushes the nuts momentarily underwater. After this, the in-shell product floats back up to the surface and onto a de-watering tray while any dirt and debris sinks. The water used is returned to the recirculating tank allowing for as little waste as possible. Once you are done destoning your product just simply pull the lower lever which releases all the dirt and stones from the machine.

## SPECIFICATIONS

Capacity : 4.500 lbs/hr

Estimated Crated Weight : 1,000 lbs

Dimensions : 22" Width x 89" Length x 48" Height

## FEATURES

- All stainless steel construction
- Continuous design does not require an operator
- Protects other processing machines from damage
- Simple design
- Conserves water
- Compact and space saving

modern electronics & equipment, inc.
