

# HIGH SPEED CRACKER

Model Number: ME-JC-24

## PRODUCT DESCRIPTION

The high speed cracker is a revolutionary design. It requires far less maintenance than other crackers used in the pecan industry. In fact, it has only 8 bearings and 3 belts, requires no compressed air, no oil and there is no feed chain. Changing from one nut size to the next can be done in minutes with the machine running. The only requirements are that the nut is sized by diameter to 1/16<sup>th</sup> of an inch and the pecan is tempered so that the kernel moisture is at 8% (6% - 11% depending on nut variety).

## SPECIFICATIONS

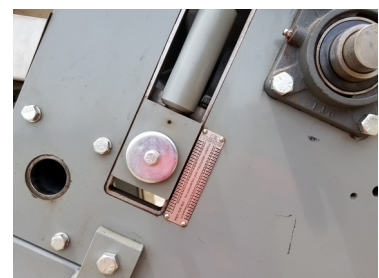

Capacity : 2,500 lb/hr In-shell Basis (Capacity will vary with nut variety)

Estimated Crated Weight : 1500 lb

Dimensions : 41" Width x 73" Length x 69" Height

## FEATURES

- Compact robust design
- Stainless steel food contact surfaces
- Fully adjustable for all nut varieties
- Minimal moving parts means minimal maintenance
- Minimal downtime due to changeover
- Extremely high cracking capacity per square foot
- As many or more halves when compared to conventional crackers
- Reduced amount of small and midget pieces
- Significantly lower decibel levels while running
